Symmetry

Symmetry Elements and Operations

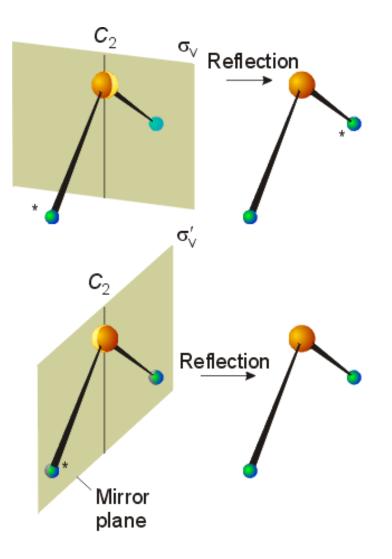

Symmetry Operation	Symmetry Element	Symbol
Identity		Е
Proper rotation	Rotation axis	C _n
Reflection	Mirror plan	σ
Inversion	Inversion centre/ centre of symmetry	i
Improper rotation	Improper rotation axis	S _n

Schoenflies notation

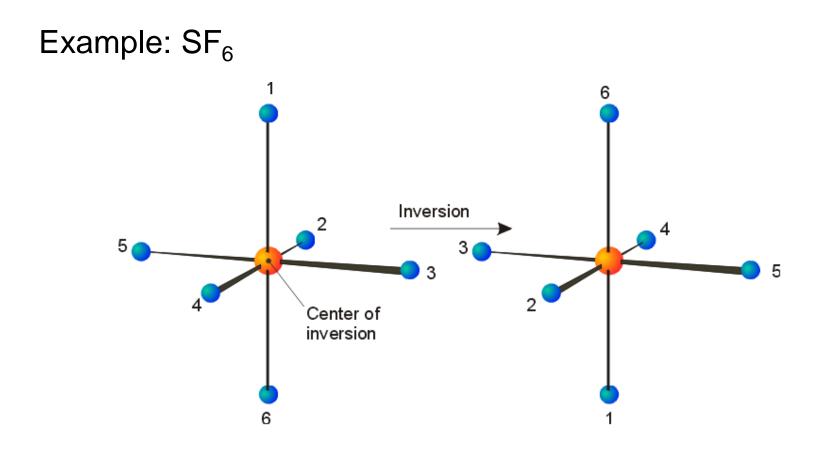

Reflection, σ

Example: H₂O

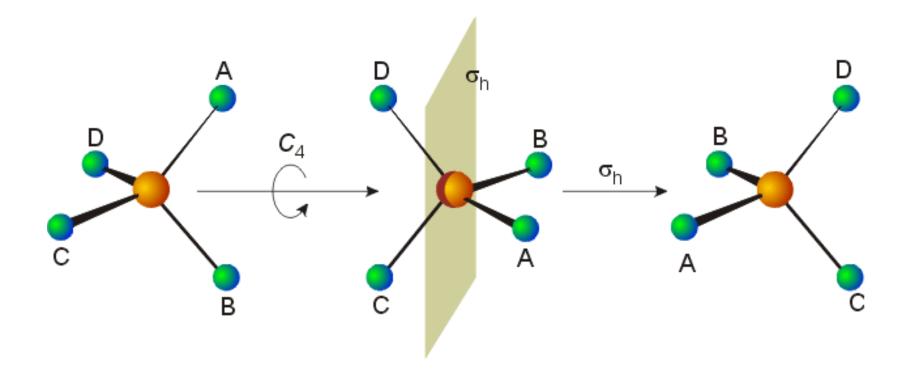

Inversion Centre

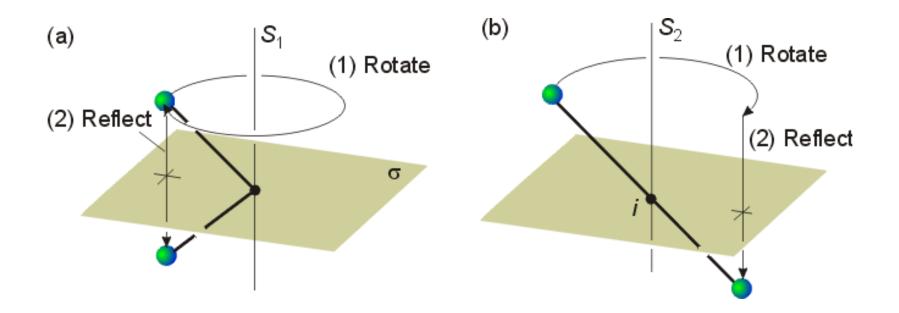

Improper Rotation (Axis), S_n

Example: CH₄

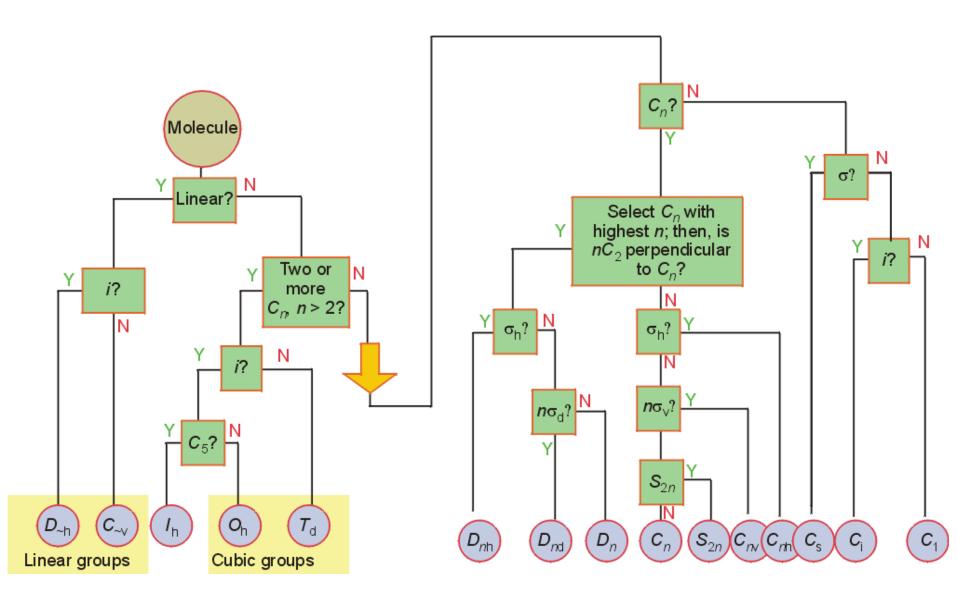

Improper Rotation (Axis), S_n

You will not find S₁ or S₂ axes.

Point Groups

Point Groups

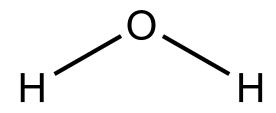

Polar point groups:

must not belong to a D group of any kind, nor T_d, O_h or I_h

Chiral point groups:

must not possess an S_n axis

(therefore, no mirror planes, nor an inversion centre, which are equivalent to S_1 and S_2 , respectively).

Mulliken labels:

A, B = non-degenerateE = doubly degenerateT (or F) = triply degenerate

g = gerade = symmetric with respect to i. u = ungerade = antisymmetric with respect to i.
